

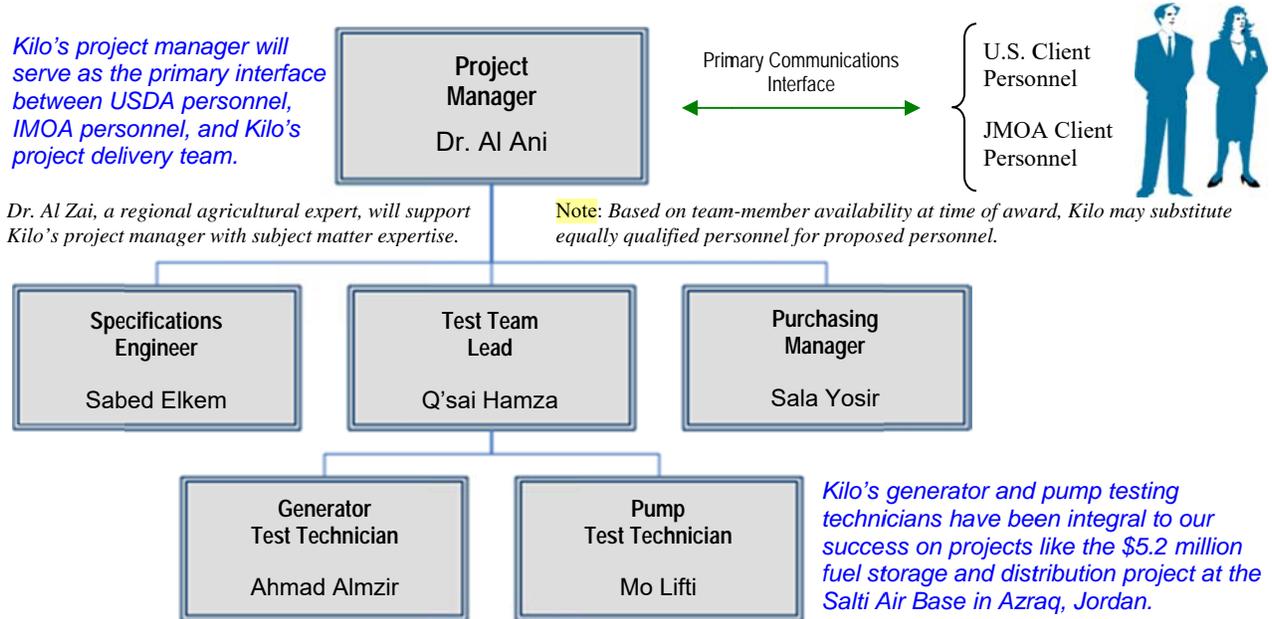

**Figure 2: Kilo’s Proposed Project Team Organization**

**1.3 Quality Control Approach**

In addition to leading Kilo’s executive team, Monsir Abadi serves as Kilo’s director of Quality, Health, Safety, and Environment (QHSE). Mr. Abadi’s strategic vision for quality assurance and control is put into practice through Total Quality Management (TQM) activities integrated into every level of the Kilo organization.

**1.4 Reporting Quality and Records Management**

Recognizing that current data, complete documents, and reliable records are essential to success, Kilo assigns each project’s information management responsibility to its respective project manager (PM). Each PM is supported by a document-control team at our home office in Amman, Jordan.

In addition to our Amman-based team, Kilo enjoys a strategic relationship with English-language document specialists based in Washington, DC. As necessary, Kilo uses native English speakers to create and review high-priority documents required in English.

**1.5 Health and Safety**

Kilo’s health and safety program, integrated throughout our organization, is the management framework behind our unparalleled safety record: more than six million man-hours of engineering, procurement, and construction in Jordan without a serious accident.

Kilo’s health and safety program includes training for new hires on their first day with the company and annual and ad hoc training thereafter. Additional elements of Kilo’s health and safety program include a database, active since 2004, that stores “near miss” data for analysis and corrective action, and a policy that Kilo’s employees and subcontractors are empowered to stop work if they see unsafe activities at our project sites.
